

Summary

15+ years of experience designing and scaling documentation systems. Accomplished documentation specialist who reflects technical concepts in an user-centric style, specializing in building scalable content systems, information architecture, and documentation frameworks that improve developer experience, content usability, and product adoption. Excellent planning and problem-solving skills, with a deep understanding of SEO and analytics.

Experienced in leading enterprise documentation strategy and operations, consolidating documentation into unified developer repositories, building scalable documentation standards and templates, and reducing documentation-driven support demand through measurable feedback loops and continuous improvement. My work has focused on partnering closely with Product and Engineering to deliver clear, scalable, and user-centric documentation while improving operational efficiency through tooling and process enhancements. Experience includes applying AI-native tools such as Claude Code to operationalize agentic content workflows for content planning, customer issue triage, and documentation generation. Experienced in leading content strategy, defining documentation KPIs, and partnering with engineering, product, and UX teams to align documentation with product direction and customer needs. Strong background in API documentation, developer guides, and large-scale technical content systems supporting complex cloud and enterprise software.

Experience

Content Designer, JPMorgan Chase

June 2021 - Present

Palo Alto, CA

Owned Developer documentation for JPMC enterprise platform.

Project managed documentation across 20+ SDLC tools using Jira Service Management.

Created and implemented a documentation-request intake process using Jira Issue Collectors, reducing email volume, increasing visibility of the book of work, and providing a scalable, repeatable workflow for 20+ engineering teams.

Partnered with Engineering teams to extract technical knowledge and build deep expertise in the firm's developer toolchain.

Partnered with Product Management and Engineering to ensure accuracy, consistency, and completeness of product across releases, owning the entire communication process.

Provided subject matter expertise by facilitating cross-functional training on docs-as-code workflows and the software development lifecycle.

Managed successful docs-as-code releases by troubleshooting and mitigating pipeline deployment issues.

Responsible for review, feature updates, and release documentation deliverables across CI/CD, Testing, and SecApp (SDLC) product tools.

Designed and developed comprehensive product documentation, including conceptual overviews, step-by-step guides, API reference materials, and interactive tutorials for developer audiences.

Authored and maintained a shared style guide and information architecture to unify content voice and structure across a multi-contributor documentation environment.

Led the content migration of legacy documentation into a unified, governed documentation portal (Hugo static site), building a tracking framework to measure migration scope, cross-references, and effort across the JPMC enterprise platform's product line.

Created, operated, and maintained doc repositories for the entire product line of 20+ SDLC tools (guides ranging from concepts, developer, onboarding, installation, migrations, troubleshooting and reference materials - code samples, schema, configurations, APIs).

Reduced content inaccuracies by incorporating a customer feedback mechanism to track and mitigate all queries across the platform.

Improved SEO across the enterprise platform by using Adobe Analytics metrics to surface search and discoverability gaps.

Analyzed and implemented customer feedback to continuously improve content effectiveness.

Built a structured stakeholder communications process to keep knowledge content aligned with upcoming product and platform changes.

Improved content clarity, scaled knowledge production, and reduced time spent on documentation tasks by adopting AI-assisted authoring tools.

Content Strategist, Roku Inc. (Contract)

Jan 2020 – May 2021

San Jose, CA

Authored and owned user documentation for Roku Platform and Products, with emphasis on Roku Pay.

Collaborated with cross-functional teams (Product, UX, Engineering, Legal) on content reviews.

Enhanced content discoverability using SEO best practices; analyzed analytics to understand support call drivers.

Architected a content process giving visibility into editorial tasks and blockers.

Created a style guide for the knowledge base and terminology nomenclature to improve usability.

Worked with the International Payments team to design and localize content across geographies, interfacing with localization vendors and LQA.

Participated in usability studies to shape knowledge base articles and on-screen text; reported on content metrics with leadership.
